AVAILABLE RIGHT NOW

NEWS RELEASE

FROM

Radio Shack®

A TANDY CORPORATION COMPANY

DATE August 3, 1977

RELEASE NO. 7741-A

SUBJECT: RADIO SHACK TRS-80 MICROCOMPUTER SYSTEM

FOR IMMEDIATE RELEASE

Computers are about to become a part of everyday life in American businesses, schools and homes, according to Radio Shack, the nationwide electronics store chain.

The company has just introduced their new Radio Shack TRS-80 Microcomputer System. Not a kit, the TRS-80 comes completely wired and tested, ready to plug in and use.

The TRS-80 System consists of a 53-key professional-type keyboard and microcomputer plus regulated power supply, a data cassette recorder which is computer-controlled through an interface, and a 12" video display monitor.

(MORE)

TRS-80 MICROCOMPUTER SYSTEM
ADD ONE

A comprehensive owner's manual will be supplied with the TRS-80 that will explain everything necessary for its operation from plugging it in through programming.

Radio Shack will also supply pre-recorded cassette programs for such applications as a small business payroll, general ledger accounting, accounts receivable and inventory control.

For educational purposes the microcomputer can be used to teach mathematics, music theory and virtually any subject through programmed teaching methods.

Just for fun, a variety of game programs will be available, including blackjack and backgammon. Other uses around the home would be personal finance management, storage of recipes, menu planning and even as a message center.

Provisions have been made in the TRS-80 for later addition of accessory, or "peripheral" items such as an additional tape recorder, "disk" programming and a printer which would create a permanent, typed record of the computer output.

At the heart of the Radio Shack TRS-80 Microcomputer System is a Z-80 microprocessor chip that serves as the central processing unit, or "brain", of the microcomputer. This remarkable device, about the size of a watermelon seed, is one of the most advanced microprocessor chips available today.

TRS-80 MICROCOMPUTER SYSTEM
ADD TWO

The Radio Shack TRS-80 Microcomputer System is priced at \$599.95, complete with video display monitor and data cassette recorder. The microcomputer alone will sell for \$399.95.

Leading the way in electronics since 1921, Radio Shack is a division of Tandy Corporation (NYSE), headquartered in Fort Worth, Texas which is also where the TRS-80 is manufactured. Radio Shack presently has more than 6,000 stores and dealers in all 50 states and Canada, as well as nearly 500 stores overseas operating under the name Tandy International Electronics.

RELEASE NO. 7741-D

SUBJECT: RADIO SHACK'S NEW MICROCOMPUTER SYSTEM --
A PERSONAL COMPUTER FOR YOUR HOME

FOR IMMEDIATE RELEASE

The latest development in electronics for the home, according to Radio Shack, is a complete, low-cost microcomputer system.

Just introduced by the nationwide electronics store chain is the new Radio Shack TRS-80 Microcomputer System. Not a kit, the TRS-80 comes completely wired and tested, ready to plug in and use.

Uses for the microcomputer around the home could include personal finance management and evaluation of investment portfolios. In the kitchen the TRS-80 may be used for storing recipes, keeping a running inventory of groceries, menu planning and converting recipes for larger or smaller servings than usual.

For the student in the home, the TRS-80 can be used as an aid to learning mathematics, music theory and virtually any subject through programmed teaching methods. And, just for fun, a variety of game programs will be available, including blackjack and backgammon.

(MORE)

HOME MICROCOMPUTER SYSTEM
ADD ONE

With the addition of an external device controller, future uses for the TRS-80 might include operation of appliances, indoor and outdoor electric lights, security systems, air conditioning and heating, water sprinklers and even monitoring your own home weather station.

A comprehensive owner's manual will be supplied with the TRS-80 that will explain everything necessary for its operation from plugging it in through programming, and a wide variety of pre-recorded cassette programs will be available for use with the microcomputer.

The TRS-80 System consists of a 53-key professional-type keyboard and microcomputer plus regulated power supply, a computer-controlled data cassette recorder and a 12" video display monitor.

Provisions have been made in the TRS-80 for later addition of accessory, or "peripheral" items such as an additional tape recorder, "disk" programming, and a printer which would create a permanent, typed record of the computer output.

The complete microcomputer system is lightweight and compact for easy portability in moving it from room-to-room as desired. The microcomputer and keyboard is only 16½ x 8 x 3½", and the video display monitor is 16½ x 13½ x 12". All U.L. listed.

The Radio Shack TRS-80 Microcomputer System is priced at \$599.95, complete with video display monitor and data cassette recorder. The microcomputer alone is available for \$399.95.

Radio Shack, a Tandy Corporation Company (NYSE), headquartered in Fort Worth, Texas, has more than 6,000 stores and dealers in all 50 states and Canada, as well as nearly 500 stores overseas operating under the name Tandy International Electronics.

Radio Shack[®]

TRS-80 MICROCOMPUTER SPECIFICATION SHEET

HARDWARE

Microprocessor: Advanced Z-80 8-bit processor.

Keyboard: Integrated ASCII, 53-key professional-type.

Video Display: Memory mapped, all graphics and alphanumerics controlled by BASIC[®] commands. Cursor control. Automatic scrolling.

Text: 16 lines of 64 characters, also software selectable to 32 characters per line.

Graphics: 128 horizontal by 48 vertical. Graphics and text can be interspersed in any manner by software.

Memory: Includes 4K Read-Only-Memory (ROM), 4K dynamic Read/Write Memory (RAM). Internally expandable to 12K ROM and 16K RAM. Total memory capability of 62K.

Input/Output: Computer-controlled cassette interface. Expansion port for additional memory and peripherals. Keyboard built-in.

Electrical: U.L. listed for 120 volts AC, 60 Hz.

Dimensions: Keyboard, 16½x8x3½". CRT display, 16½x13½x12".

SOFTWARE

Radio Shack Level I BASIC in ROM.

Level I Features: standard BASIC statements; floating point arithmetic; numeric, array, and string variables; video graphics commands; cassette save and load commands.

Commands: NEW, LIST, RUN, CONTinue, REMark, LET, FOR-NEXT-STEP, GOSUB-RETURN, STOP, END, GOTO, IF-THEN, INPUT, ON . . . GOTO, ON . . . GOSUB, PRINT, CSAVE, CLOAD, DATA, READ, RESTORE.

Functions: MEM, TAB, INT, ABS, RND, +, -, *(multiply), /(divide), <, >, =.

Special Commands (Including graphics): CLS (clear screen), SET (x,y), RESET (x,y), POINT (x,y), formatted PRINT. Array and string capability. Data storage and retrieval.

OPTIONS

CRT Display: 12" diagonal screen.

AN INTERVIEW WITH RADIO SHACK'S PRESIDENT
REGARDING THE COMPANY'S MICROCOMPUTER BUSINESS

Fort Worth, TX - - "The image of leadership in electronics" had a lot to do with Radio Shack's decision in 1976 to enter the microcomputer market, according to Lewis Kornfeld, president of the Radio Shack division of Tandy Corp. The Company's system was introduced at a special press party in New York City on August 3.

"Too many people think of The Shack as a place where you can buy low-cost consumer electronics items made by others," Kornfeld said, "whereas the reverse is really true - - we manufacture nearly 40% of our goods in company-owned factories and most of our other equipment is designed by us and custom-made for us under contract. We take almost all the output of several of our most important outside sources.

"So the image Radio Shack seeks," he added, "is one of higher than average technology and innovation. For that reason we are building our TRS-80 Microcomputer System in one of our 16 Fort Worth, Texas, factories and letting the whole world know that our capability goes far beyond \$100 CB radios and even \$500 hi-fi receivers which are, incidentally, things we also make ourselves."

Q. Why have you called the TRS-80 "the most important product" ever made by your company?

A. Because it's new state-of-the-art technology, demonstrating Shack's vaunted ability to do-it-ourself. And because it opens all sorts of future - - and I'm talking about near-future, months not years - - horizons for related sophisticated products and spin-offs from micro-processor know-how. We already have one such item, our Realistic PRO-2001 microprocessor-circuit scanner radio. And for another thing, TRS-80 may very well lead us into new (for me) marketing fields.

Q. How does Radio Shack intend to market the TRS-80?

A. Our basic plan calls for one immediate method - - via selected company-operated stores worldwide, plus franchise and dealer stores. There are four alternative methods, many of which will probably be tested in 1977 - - mail order, direct-selling by salesmen, wholesaling beyond our established system, and discrete "computer stores."

Q. Who are the intended or anticipated customers?

A. Naturally we want to sell anyone as many TRS-80 systems as quickly as we can, and in fact we're taking orders from August 3 on. So we don't rule out any category of buyer. The most obvious types of customers would include small businesses, schools, labs, computerphiles or hobbyists, plus anyone interested in learning computer programming.

Q. What about home users?

A. Well, every user lives in a home, but we can't immediately hope to see products like TRS-80 used widely for such in-home things as recipes for cooking, appliance control, games and so on, although we'll do our best to interest The Average Man in our system.

Q. When will you deliver your first production and how many will you sell during the next 12 months?

A. Our plan is to begin delivery in September. The number we sell is dependent upon (a) conceivable but unlikely problems which might be generated in the field, (b) our productivity rate, and (c) the demand. We are prepared to sell quite a few thousand systems, but until we really start selling we just can't come up with a believable number.

Q. What about software? Isn't it true that a lot depends on having software available?

A. Radio Shack will include some game software with the original system package. Beyond that we will make available, as optional extra items but at reasonable cost, software for such applications as accounting, payroll, games and so on. We certainly agree on software as a basic need. We also feel that software prices we've seen around the industry are far, far too expensive. Mind you, we're not out to undersell but to give value and reliability. That's what Radio Shack is all about.

Q. What about peripheral items?

A. By this coming December we expect to begin marketing a disc drive, a printer, and one or two items relating to expanding the capability of TRS-80 in terms of user-programmable bytes or words.

Q. How was Radio Shack able to market a microcomputer system at so low a cost? And also, will the add-ons be equally reasonable?

A. Radio Shack's pricing is in fact very realistic. We decided to skip a few rounds of the price-erosion tactics we've been subjected to in such categories as calculators and electronic watches, where immediate profits were quite obviously sacrificed in the interest of ultimate market share. But I can assure you that TRS-80 as it stands today is not, repeat "not", a loss leader. We will expense our R&D rapidly, that is we won't lay it off against distant potential sales. The same sensible pricing will apply to peripherals. We think prices are too high today and that we won't be alone in making micros and attachments affordable in the 1977-8 period. Radio Shack has a couple of clear advantages over actual and potential competition. First, we're quite vertically integrated. Second, we do our own distribution, advertising and servicing when we sell through our existing store chain. Third, we don't load our products with a lot of the S, G & A costs incurred by the typical very large manufacturers. Fourth, most of the currently visible competition appear to be inadequately financed; this results in uncertain deliveries, claims which cannot be satisfied, services which can't be provided, and confidence which certainly can't derive from a few smart young guys operating out of a garage - - and this also applied to most of the computer stores we've visited.

Q. Why did you call TRS-80 "Radio Shack" instead of "Realistic" or one of your other well known brands?

A. Now we're back to where we started, back to our image. When we put the words "Radio Shack" onto a brilliant new device in a new category of goods, we felt it would definitely enhance our image in the public's perception and that this would rub off onto the rest of our line. From the start we instinctively branded the TRS-80 with our company name. We already have awareness in an enviable amount - - the result of billions in sales, millions in advertising, and thousands in locations. Now we desire to elevate that image from a qualitative standpoint, to raise it not to ridiculous heights but to precisely the height we actually deserve. Not enough people know we have over 4000 employees exclusively devoted to company-operated manufacturing, even though we don't keep it a secret. The TRS-80 if nothing else, should bring us the extra glamour you can't buy with advertising and sales promotion, or with claims and promises. Radio Shack as a technical company, a techniques company, a state-of-the-art company . . . that, quite aside from potential profits, is one of the fundamental aims of our microcomputer division. So you may rest assured that we did not approach this project opportunistically, as, for example, a lot

of companies did with things like electronic watches and CB radio. Again aside from mere profits -- how much is image worth? Millions we think. And how much is a new business venture worth? I think "incalculable" is a proper word. And why microcomputers instead of something else? Because, without any question, this device is inevitably in the future of everyone in the civilized world -- in some way -- now and for as far ahead as one can think.

SUBJECT:

RADIO SHACK MICROCOMPUTER SYSTEM

FOR EDUCATIONAL APPLICATIONS

FOR IMMEDIATE RELEASE

Radio Shack, long a leader in educational kits for learning about electronics, is now offering a complete microcomputer system which may be used as an aid to programmed learning about just about any subject.

The new, low-cost Radio Shack TRS-80 Microcomputer System can be an extremely versatile educational tool and teacher's aid. Not a kit, the U.L. listed TRS-80 comes completely wired and tested, ready to plug in and use.

In mathematics, for example, a pre-recorded Math I cassette program will provide training in addition, subtraction and multiplication and include a teacher's guide. Additional programs are being developed for training in long division and algebra I.

(MORE)

MICROCOMPUTER FOR EDUCATION
ADD ONE

Solving math problems isn't the only thing Radio Shack's TRS-80 Microcomputer System can do in the classroom. It can be programmed to ask students questions on virtually any subject.

The computer can be programmed to ask the student a question. The student would then enter his answer and the computer would score his answer as correct or incorrect, then either give the student another opportunity to answer correctly, or provide the correct answer and move on to the next question.

For students who require repetitive instruction and immediate evaluation of their progress, the TRS-80 frees the instructor to devote time to other classroom activities. Through its ability to display graphics, the microcomputer may even be used to give elementary spelling tests.

As a teacher's aid, the TRS-80 may perform such tasks as grading test papers and storing a continuous progress report on each student. This information may be instantly retrieved for updating and stored again for future reference.

Radio Shack will provide full support in instruction manuals, software programming, firmware and hardware for the TRS-80. A comprehensive owner's manual supplied with the microcomputer explains everything necessary for its operation from plugging it in through programming.

(MORE)

MICROCOMPUTER FOR EDUCATION
ADD TWO

The TRS-80 System consists of a 53-key professional-type keyboard and microcomputer plus regulated power supply, a computer-controlled data cassette recorder and a 12" video display monitor.

Provisions have been made in the TRS-80 for later addition of accessory, or "peripheral" items such as an additional tape recorder, "disk" programming, and a printer which would create a permanent, typed record of the computer output.

The complete microcomputer system is lightweight and compact for easy portability in moving it from room-to-room as needed. The microcomputer and keyboard is only $16\frac{1}{2} \times 8 \times 3\frac{1}{2}$, and the video display monitor is $16\frac{1}{2} \times 13\frac{1}{2} \times 12$ ".

The Radio Shack TRS-80 Microcomputer System is priced at \$599.95, complete with video display monitor and data cassette recorder. The microcomputer alone is available for \$399.95.

Leading the way in electronics since 1921, Radio Shack is a division of Tandy Corporation (NYSE), headquartered in Fort Worth, Texas which is also where the TRS-80 is manufactured. FOR SMALL BUSINESSES

FOR IMMEDIATE RELEASE

Small businesses can now afford to computerize many areas of their operation, according to Radio Shack, the nationwide electronics store chain.

Radio Shack has just introduced their new, low-cost TRS-80 Microcomputer System. Not a kit, the TRS-80 comes completely wired and tested, ready to plug in and use.

Possible business applications include: general ledger accounting, payroll, inventory control, accounts receivable and other clerical functions which previously required tedious, time-consuming paperwork.
