DATE: Sept. 29, 1982

RELEASE NO.: RS-83-077

SUBJECT: Hard disk for Mod I/III

FOR IMMEDIATE RELEASE

Radio Shack introduces 5 Megabyte hard disk drives for TRS-80® Model I
and Model III computers - includes enhanced operating system.

Radio Shack, a division of Tandy Corporation, now offers owners and users of TRS-80® Model III and Model I desktop computers the ability to expand disk storage by up to 20 Megabytes using high speed Winchester technology hard disk drives.*

A primary 5 Megabyte Hard Disk Drive (26-1130), including an enhanced operating system language, is available for \$2495.00 at Computer Centers and participating Radio Shack stores and dealers. As many as three secondary 5 Megabyte drives can be added to a single TRS-80 Model I- or Model III-based system; each secondary Hard Disk Drive (26-1131) is available for \$1995.00 (plus installation, not included) at Radio Shack stores, Computer Centers and participating dealers.

Compatible with most Model III and Model I software, these hard disk drives offer very large capacity, high speed operation and convenience. This is of great benefit in inventory management, accounting, mailing list maintenance, electronic filekeeping and other user applications requiring a large data base.

(MORE)

--2--

Each disk system can store over 1000 different files, or a single file can be created as large as five megabytes. For easy file reference, the file directory listing is displayed in alphabetical order.

The new hard disk operating system includes an advanced communications package with high-level communication and direct downloading to disk. A print spooler is included, as well as versatile printer output formatting. Advanced keyboard operating features include type-ahead for fast data entry and key redefinition for access to often used commands.

Backup's special features allow easy selection of specific files and fast backup of large files to multiple diskettes. For example, selection of specific files is easy by specifying only those that have been modified, or modified in certain date ranges, or those that are old or new on the destination diskette. When backing up from the Hard Disk Drive, large files will be automatically spanned across multiple diskettes. When later recreating the file on hard disk the system will identify diskettes not associated with the file to be reconstructed and reconstruct the file regardless of the order of insertion of the diskettes.

Also, a powerful Job Control Language lets a user compile and later execute a predefined series of commands; these can include screen alerts, conditionals and user interaction. This feature makes many data processing operations virtually automatic.

*TRS-80 Model I owners will require a Model I adapter kit (26-1132), available for \$39.95 at Radio Shack stores, Computer Centers and participating dealers. This kit includes a hard disk system adapter, cable and diskettes. Installation (not included) may be required.
