DATE: Sept. 29, 1982

RELEASE NO.: RS-83-082

SUBJECT: DMP-400 printer

FOR IMMEDIATE RELEASE

Radio Shack introduces new full-featured, 132-column TRS-80® DMP-400 printer.

Radio Shack, a division of Tandy Corporation, announces a new full 132-column (15-inch wide) printer capable of handling business and data processing output. The TRS-80® DMP-400 printer (26-1251) is available for \$1195.00 at Radio Shack Computer Centers and participating Radio Shack stores and dealers.

The DMP-400 is a full-featured 9 x 9 dot-matrix printer capable of producing 140 characters per second at 10 cpi. (Throughput at 132 columns is 51 lines per minute. The bidirectional logic seeking head can achieve greater than 125 lines per minute at column lengths of 40 and less.) It can operate in three print modes - data processing for efficiency and speed; correspondence to emulate daisy-wheel printers; and bit-image for dot-addressable graphics.

In addition to its standard 10 cpi print, the DMP-400 offers a 12 cpi "elite" form, correspondence and proportional-spaced forms, a 16.7 condensed form, and 10 cpi block graphics - plus bold and elongated print in all fonts.

The DMP-400 has a specially designed, noise-reducing cover ; an adjustable tractor to allow use of 4- or 15-inch fanfold paper; line feed in 1/6, 1/8, 1/72 and 1/216 increments; and selectable parallel and TRS-80 Color Computer serial interfaces (600/1200 baud).

(MORE)

—2—

The DMP-400, is one of three new multi-mode dot-matrix printers Radio Shack is adding to its line of computer peripherals. The DMP-200 (26-1254), and the DMP-500 (26-1252), are available for \$799.00 and \$1795.00 respectively, at Radio Shack Computer Centers and participating Radio Shack stores and dealers. These two new printers offer many of the same features as the DMP-400 including a word processing function to emulate daisy wheel features; a bit-image mode for graphics; and a data processing mode featuring efficient throughput.
