

Product : TRS-80 Color Computer 2

Introduction: September 28, 1983

Config/Price: 16K Standard BASIC, \$159.95
16K Extended BASIC, \$199.95
64K Extended BASIC, \$259.95

Processor : 6809E @ 0.894 Mhz.

RAM : 16-64K.

Standard I/O: Color Computer Serial, 1500-baud cassette, and Program Pak (ROM cartridge), 2 joystick, and TV modulator ports.

Disk Drives : Up to 4, optional external 5-1/4" 153K floppy disks.

Keyboard : 53-Key integral.

Monitor : 32x16. Built-in video modulator for connection to any TV.

Graphics : Standard - Range from 32x64 (8 colors) to 192x256 (1 color & background color).

Expansion : Internal RAM, external ROM pack, Deluxe RS-232 program pak.

Construction: One-piece.

Color : Fawn Gray (off white).

Operating : Microsoft 8K BASIC or 16K Extended BASIC (included). DISK BASIC Systems & : is included with the disk drive.

Languages: Optional - LOGO, Editor/Assembler, PILOT OS-9 (optional).
BASIC-09, "C".

Features : This is the latest version of Radio Shack's very popular Color Computer (first introduced in July, 1980). Extended Color BASIC allows simple basic-language creation of complex designs without the use of machine language calls or subroutines. The 6809 is an extremely powerful processor. A "little brother" to the MC-68000, it features 16-bit internal structure, with 8-bit data and address lines. Combined with the UNIX-like OS-9 operating system, Color Computer 2's disk configuration forms a true multi-tasking (even multi-user capable) computer system. The Color Computer is more easily and affordably expandable than most of its competition, and service is usually more readily available.
