TANDY TRS-80 MODEL 2000 PERSONAL COMPUTER INTRODUCTION

REMARKS BY: RON G. STEGALL

SENIOR VICE PRESIDENT COMPUTER MARKETING

You have just seen a fairly detailed overview of the performance capability and features of the exciting new Tandy TRS-80 Model 2000 Personal Computer, a product that we feel fits very well into our current TRS-80 business product line. Positioning itself very comfortable between our entry level Model 4 and 4P TRS-80's at the under \$2000 price point, and our Model 12/16 products which feature true expandability of up to six users with our Zenix multi-tasking, multi-user operating system and up to 255 users thru our ARC-NET local area networking system. Now what I would like to do for the next few moments before we let you really get a close 'hands-on' look at one of the most powerful MS-DOS personal computers available in the marketplace today is to give you a quick overview of our marketing plan for the new Tandy 2000.

Following Tandy's new product tradition for this past year, and unlike many other manufacturers in this industry, when Tandy is ready to talk about a new product is when we are ready to bring that new product to market.

Tomorrow morning at 9:00 a.m. local time the Tandy TRS-80 Model 2000 personal computer will be on display and available for sale from every one of our 650 Computer Departments, or "Plus" Computer Centers as we now refer to them, as well as every one of our 420 full service and support Radio Shack Computer Centers across the nation.

However, just putting a new CPU on the shelf is not how Radio Shack expects to introduce a product with the ultra high performance and features of the Tandy 2000 personal computer -- by 10:00 p.m. this evening we will have completed the product orientation and training of every one of our over 2600 field marketing and management personnel on the features and operation of the Tandy 2000 PC.

This means that not only will the Tandy 2000 be available from our 1070 company owned and managed computer specialty stores first thing tomorrow morning, but that our total computer marketing team from our stores, our national account and federal marketing division, as well as our educational marketing division will be ready to sell the Tandy 2000 as well as the features and versatility of the full selection of well known and tested quality software products that are available for the new machine.

Well known word processing products such as:

a) PFS:Write - a product as easy to use as a typewriter, but with the power and versatility of a word processor. You can even print text with reports and graphs created by PFS:FILE and PFS:Report.

b) Microsoft-Word - A program with truly amazing capabilities. Multiple windows let you view several documents or portions of documents at once. Your text is even displayed exactly as it will be printed, including the type style.

c) MultiMate word processing system - The highly acclaimed program that duplicates the features and power of a dedicated word processor. High-speed, excellent documentation and easy-to-learn commands make it perfect for writers, managers and secretaries.

Well known database and graphic products such as:

d) PFS:File - An extremely simple way to create and organize your own personalized electronic filing system. Store, retrieve and review information in seconds with a few keystrokes. Ideal for a variety of applications - business, professional, home and education.

e) PFS:Report - A powerful analysis tool that creates specialized tabular reports from data stored in PFS:File. You can easily produce presentation-quality reports of sales, inventory, employee information and more.

f) PFS:Graph - The easy way to transform numerical data into easily understood bar charts, line graphs and pie charts. Use the data already stored in PFS:File, or enter new information. Great for use in sales presentations, meetings, sales reports and documentation.

g) dBase II - A relational data base management system that's as powerful as any on the market. Yet "plain English" commands make it easy for both beginning and advanced users. You can quickly create a full business information system that will grow as you grow. And you can easily add, delete, edit, display, print and manipulate your information. Create customized reports that access data in several data bases. And when you change the file format, the data isn't affected.

Spreadsheet analysis products such as:

h) Microsoft-Multiplan spreadsheet program - This popular "second generation" electronic spreadsheet integrates with other Microsoft programs. You can link different worksheets so information is transferred between them automatically. Create multiple windows for simple data comparison. And sort data either numerically or alphabetically. On-line reference guide and plain English prompts make it exceptionally easy to use. Flexible formatting options let you print elegant finished reports.

i) And soon to be available are total integrated products such as the newly announced MS-Windows package from Microsoft as well as the just announced Ovation package, a truly next generation integrated productivity tool with simultaneous display capability of the different functions of word processing, spreadsheet, data management and graphics with ease and flexibility for the user, never previously available on earlier generation products.

Other available software includes:

j) MAI/Basic Four - The complete business accounting system that is already proven in thousands of minicomputer applications worldwide. Basic Four's integrated software is just what small businesses have been waiting for and offers features never before available on a personal computer. Clear, concise documentation will have you speeding through tasks that previously took days to complete. The commands for the programs are similar, so if you learn

one, you've practically learned them all. The system includes General Ledger, Accounts Payable, Accounts Receivable, Inventory Control, Order Entry, Purchase Orders, and Payroll. This state of the art accounting system is available exclusively on the Tandy 2000 personal computers.

k) Videotex Plus - The deluxe communications program that lets you access major information networks by phone. Advanced features in this package reduce on-line time and costs. The program comes complete with one free hour of connect time on CompuServe and Dow Jones News/Retrieval.

l) A complete selection of programming languages including MS-Pascal Compiler, MS-GW Basic Compiler, MS-Fortran, MS-Assembler, as well as the MS-DOS version of the popular RM-Cobol.

m) Other packages available include such personal programs as The Home Accountant Plus, and entertainment program such as Planetfall and The Witness.

This complete array of immediately or very soon to be available software as well as a broad selection of true MS-DOS compatible third party software that is already available in the market, the most popular of which will be offered thru a newly created mail order support program making many non Radio Shack labeled products available for the first time thru our distribution system, means that the Tandy 2000 personal computer not only goes on sale tomorrow morning in every one of our 1070 Computer Centers across the U.S. but it is also ready to be put to work immediately by our customers to completely satisfy whatever personal computing application needs they have.

Of course user training has always played a big roll in Tandy's marketing program and as in the past Radio Shack stands ready to train our customers and their employees in our over 400 Radio Shack Computer Center training facilities on the basic use of the Tandy 2000 as well as, soon to be available in each training center, complete hands-on operator training for the popular MS-DOS operation system and as well as most of our software applications.

This total program of trained experienced marketing personnel, immediately available library of application software supported by our total training and support network, means that the TRS-80 Model 2000 will be an exceptional success and anticipated sales for this next few months could only be restricted by some anticipated delays in the manufacturing ramp up of the new high performance Intel 80186 microprocessor chip.

The last point I would like to make concerning our marketing plan for the Tandy 2000 that I believe is worth mentioning is the impact we believe this new true 16 bit personal computer will have with our over 550 'Fortune type' National Account Contract and Federal Agency customers. Obviously the superior performance capability of the Tandy 2000 over most other currently available MS-DOS machines in the marketplace will be of major importance to these quantity users of personal computers.

To insure that these newly available features and power are understood by these key accounts we will be holding a private briefing this evening here in Las Vegas for all of our volume customers that are in attendance here at COMDEX and will be following up tomorrow morning at 11:00 a.m. with sessions in over 200 cities across the country for those accounts that are unable to be in attendance at this evening's briefing.

In conclusion, we here at Tandy believe very strongly that this new, exciting TRS-80 personal computer folded into our current line of handheld, portable, transportable and desktop home and business micros, and coupled with our unmatched company owned and managed distribution system of over 1000 speciality Computer Centers puts Radio Shack in the ideal position to continue and accelerate our current trend of profitable growth as the #1 retailer in the world of small computers.
