

What is the Tandy 1000 ???
=====

CONFIDENTIAL

copy
1/2/89

The Tandy 1000 is the newest member of the Tandy MS-DOS Personal Computer family. Designed to be compatible yet superior to the IBM PC, the Tandy 1000 boasts more features and a lower price than IBM.

Unfortunately, when you buy an IBM PC, you only get half of a machine. You must buy some kind of graphics adapter whether monochrome or color, a printer adapter, and joystick adapter. Oh, you want to run applications ALSO ??? Well, then you need to buy DOS and BASIC. By the time you add up everything that you REALLY need to use a PC, you've spent hundreds of dollars extra. All of these extras are standard on the Tandy 1000. So when you look at the price of our computer, that's the price you pay for a useable system. And WHAT A PRICE! The IBM PC equipped with all of the above features and color monitor costs over \$3100 ! The same Tandy 1000 system costs less than \$2050! That's over a thousand dollar savings! Whether you are a small business or a home user , \$1000 could buy alot of diskettes (or memory or a printer)!. And you don't sacrifice anything!

no monitor

The Tandy 1000's features list is longer than IBM's option list. Consider the following:

- * 8088 16 bit microprocessor *DMA*
- * 128K built in RAM (Expandable to 640K)
- * Monochrome or Color Graphics Adapters (640 x 2⁰₁₀ bit resolution, ⁸ colors)
- * TV interface (requires external RF Modulator)
- * 360K byte floppy disk drive *DSDD*
- * Advanced 90 key keyboard *keypad*
- * 3 voice sound circuit for complicated sound and music generation *TI chip*
- * Built-in speaker for audible warnings and entertainment
- * Parallel printer interface- Just plug in printer and go! *IBM printer comp*
- * Two joystick interfaces for graphics input and games.
- * Light pen interface for easy user interfacing and training.

same
in 6

One of the biggest features of the Tandy 1000 is its expansion possibilities. Start with a second disk drive, add more memory, a built-in MODEM, an RS-232 interface, or even a hard disk. And expansion doesn't stop there. Since the Tandy 1000 expansion bus is PC compatible, you can add all types of special purpose option cards (Maximum card length is 10 inches).

when ?

The Tandy 1000 operates at the same speed as an IBM PC (in some cases faster) and almost twice as fast as the IBM PCjr.

Whatever your application, the Tandy 1000 is the personal computer for you. Tandy has the widest selection of software available of all the computer manufacturers. From spreadsheet to word processing to integrated applications to home education and entertainment, it's all available at your local Radio Shack Computer Center. You'll see the biggest names in the business ! Multiplan, Microsoft Word, Lotus 1-2-3, Homeword, Friday!, PFS: Series software, Accounting, One on One, Fraction Fever, Kindercomp, and many more. You'll see the best developers on the Tandy 1000. Microsoft, Software Publishing, Lotus, Digital Research, Sierra Online, Electronic Arts, Infocom, Knoware, Ashton Tate, Ryan McFarland,The list goes on.

The only way for you to see what an excellent value the Tandy 1000 is, is to see it yourself. The Tandy 1000 is available NOW at any Radio Shack Computer Center or Radio Shack Plus Computer Center across the nation. See it today !

Tandy 1000- The best computer \$2000 can buy...for only \$1199.

CONFIDENTIAL

Q: Just how compatible with the IBM PC is the Tandy 1000?

A: The Tandy 1000 is compatible with most PC software including Lotus 1-2-3 and Microsoft Flight Simulator. Much PCjr software will also run. However, in some cases, color and presentation may be different. This means that a program that uses a red background on a PCjr may be blue on a Tandy 1000. This is due to differences in the video circuit.

Q: Are the monitors compatible with the IBM PC, PCjr and Tandy 2000?

A: The CM-2 Color Monitor is compatible with both the IBM PC and PCjr. However, the VM-2 Monochrome Monitor will work only with a PCjr. The PC monochrome monitor circuit is unique. Any software written specifically written to operate with this adapter will not function on the Tandy 1000 or IBM PCjr. None of these monitors are compatible with the Tandy 2000.

Q: Are programs written for the Tandy 2000 compatible with the Tandy 1000?

A: Any program that is written using published IBM PC BIOS calls or written in GW-BASIC will function on both the Tandy 1000 and 2000. Any program that takes advantage of the unique features of the Tandy 2000 (such as high resolution graphics) will not function. Also, since the disk formats are not compatible, the disk must be formatted in 40 track double sided mode.

Q: Does the Tandy 1000 run at the same speed as the PC?

A: The Tandy 1000, IBM PC and PCjr all use a clock speed of 4.77 MHz. However, this does not mean that all software operates at the same speed. It depends on how many tasks must be performed by the microprocessor and how often. ie. Most applications on the PCjr run at approximately 50% of the speed of the PC. The Tandy 1000 executes software at approximately the same speed as the PC and in some cases, faster. This is dependent on the type of software and how much memory is installed in the computer.

Q: Why can execution speed vary with the amount of memory installed in the computer?

A: The Tandy 1000 does not include a DMA (Direct Memory Access device) in the base system. When you buy additional memory, this device comes on the board. When installed, the DMA takes over tasks normally performed by the microprocessor. This speeds up software execution speed.

Q: How much software will be available for the Tandy 1000?

A: There will be a wide assortment of software available at introduction. Approximately 40 packages will be available within the first three months. Also, we will be offering other top name software in our Express Order Software program at introduction.

Q: What kind of software will be offered initially?

A: The Tandy 1000 is the perfect computer for small businesses and home users. Therefore, the initial offerings will be directed for those customers. For business users, Lotus 1-2-3, Multiplan, MS-Word, DR Graph, Friday!, PFS: Write, Graph, File, and Report, Finance Manager, Business Accounting and communications will be among the initial offering. And of

CONFIDENTIAL

course, the Tandy Workstation is bundled with every Tandy 1000. For home users, initial offerings include Homeword, Homeword Speller, Knoware, Flight Simulator, Micro Illustrator, Wizard of Id Touch Type, Kingsquest, Pipes, One on One, Pinball Construction Set, Lode Runner, Spinnaker software, and Infocom games. More will be introduced early in 1985. One of the biggest features of the Tandy 1000 is that it runs IBM PC (and some PCjr) software. This will allow you to buy software written for an IBM PC and run it on the 1000.

- Q: To run IBM software on a Tandy 2000, I had to copy it to another disk and could not interchange diskettes. Is this the case with the Tandy 1000?
- A: The Tandy 2000 features high capacity disk drives (720K each). This prevented total software compatibility with the PC. The Tandy 1000 can interchange software with the PC and PCjr without any extra effort.
- Q: Will the Tandy Workstation be available as a separate product for use with other computers?
- A: The Tandy Workstation represents a major effort to provide customers with a useable product when they walk out of our store. It will be offered for other Tandy computers but is not being developed for use with other manufacturer's products. Since the Workstation is bundled with every computer, it is not likely that it will be sold separately.
- Q: By whom and where is the Tandy 1000 manufactured?
- A: The Tandy 1000 was designed in whole by Tandy engineers and is manufactured by us in our Fort Worth facilities.
- Q: When will the Tandy 1000 be available and through which outlets?
- A: The Tandy 1000 will be available immediately following announcement (early November) through any Radio Shack Computer Center or Plus Computer Center and participating dealer/franchise stores.
- Q: Why has Tandy waited so long to introduce a true IBM compatible?
- A: Our goal in the development of this product was to capitalize on the availability of PC compatible software and provide computer users with a good price/performance value at the same time. With the continuing drop in semiconductor prices, we have developed that exact product. Due to our distribution strength, we have brought this product to market at a price unsurpassed in the industry.
- Q: Is this product really a PC or PCjr look-a-like?
- A: The Tandy 1000 is a PC compatible with enhancements. Wherever possible, we made the enhancements compatible with the PCjr. This was simply to guarantee a large software base at introduction. However, there are also enhancements that are neither compatible with the PC or PCjr.

Feature comparison between Tandy 1000, IBM PC, and IBM PCjr

Feature	Tandy	PC	PCjr
-----	-----	-----	-----
128K RAM	yes	yes	yes
Mono graphics	yes	option	yes
Color graphics	yes	option	yes
Joysticks	yes	option	yes
Keys on Keyboard	90	83	62

Tandy 1000 Features List

CONFIDENTIAL

8088 Microprocessor
128K RAM (expandable to 640K)
Monochrome and Color Monitor Adapters (640 x 240 resolution)
TV interface (requires external RF Modulator (Cat. No. 15-1273,\$24.95))
Double sided double density 5-1/4 " floppy disk drive (360K capacity)
90 key detachable keyboard with numeric keypad (same as Tandy 2000)
3 voice sound for audio presentations and entertainment software
Built-in speaker and audio output jack
Parallel Printer interface (supports IBM and Tandy printers)
Two joystick ports (PC software compatible, Color Computer hardware compatible)
Light pen interface (IBM PCjr software compatible)
3 PC compatible expansion bus slots (maximum board length = 10 inches)
MS-DOS and Microsoft GW-BASIC
Tandy Workstation integrated software

Base System Price: \$1199

12" High Res Green Screen Mono Non-Glare monitor (Cat. No. 26-3211,\$159.95)
13" High Res Color Non Glare monitor (PC compatible,Cat. No. 26-3212,\$549.95)
TV operation requires RF modulator (Cat. No. 15-1273,\$24.95 and cables)

Options available at introduction:

Secondary 360K disk drive (installation recommended) Cat. No. 25-1005, \$299.95
128K Memory expansion (expands on board to 256K) Cat. No. 25-1004,\$299.95
300 baud Direct connect Modem (Cat. No. 25-1003, \$179.95)
RS-232 Interface (Cat. No. 25-1006, \$99.95)
TRS-80 Touch Pad (Koala type) Cat. No. 26-1185, \$59.95

Future options to be available:

Hard Disk Interface Board
Light Pen
Mouse
Network board

The following is a list of Business software scheduled for Project 557.

Program	Vendor

Homeword	Sierra Online
Homeword Speller	
PFS: File	Software Publishing
PFS: Report	
PFS: Graph	
PFS: Write	
Lotus 1-2-3	Lotus
Business Accounting	Tandy
Portfolio Decisions	Eagle Software
Finance Manager	InterActive Software
Friday!	Ashton Tate
VideotexPlus	Tandy
DR Graph	Digital Research
Multiplan	Microsoft
Microsoft Word	
Cobol Development	Ryan McFarland

The following is a list of educational software being developed for Project 557. Availability is not yet determined but all should be available for Christmas season.

Name	Software Vendor
------	-----------------

Facemaker	Spinnaker
Kids On Keys	
Kindercomp	
Fraction Fever	
Alphabet Zoo	
Kidwriter	
Trains	
Pipes	Creative Software
Learning in Leeper	Sierra Online
Knoware	Knoware
Wizard of Id Touch Type	Sierra On Line

Entertainment

Chinese Juggler	Creative Software
Demon Attack	Imagic
Micro Illustrator	Island Graphics
One on One	Electronic Arts
Pinball Construction Set	
Lode Runner	Broderbund
BC's Quest for Tires	Sierra Online
King's Quest	
Cutthroats	Infocom

J=N LS=1 PF=1 LH=10 RH=79

Main Features

Basic Unit (\$1199):

- 8088 8/16-bit microprocessor
- 128 RAM (expandable to 640K)
- Monochrome or Color Graphics adapters
- 640x200 high res
- TV interface (requires RF modulator)
- 1 double-side, double-density 40-track drive, 2a0K
- 90-key keypad (same as 2000)
- Three-voice sound circuit (TI SN76489A)
- Built-in speaker
- Parallel printer interface
- two joystick interfaces
- Light pen interface
- Audio output jack
- Three PC-compatible expansion bus slots (max. length=10")

Expansion options:

- Second drive
- High res green screen mono monitor
- High res color monitor (PC compatible)
- RF modulator
- 128K memory expansion with direct-memory access
- 300-baud direct connect Modem
- RS-232 interface
- Touch Pad (Koala type)

Future options:

- Hard disk interface board
- Light pen
- Mouse
- Network board
