Tandy Corporation/Radio Shack Announces Two Data Terminal Devices

Tandy Corporation/Radio Shack has announced the DT-100, an ANSI 3.64 compatible display terminal, and a 9600 baud serial to parallel converter. The DT-100 offers a full range of user features, has a compact ergonomic design, and is fully software compatible with the DEC® VT-100 so it will work correctly with the vast majority of DEC or UNIX™ based software systems. Also included is a built-in serial printer port with programmable baud rate. The 9600 baud serial to parallel converter allows Radio Shack's broad line of parallel printers to be used with the DT-100's serial printer port.

The DT-100 includes a 14" screen with a high resolution character set for improved user satisfaction. The low profile sculpted keyboard features a redesigned cursor key layout, and VT-220 compatible editing keys along with 16 programmable function keys.

The full 128 character ASCII character set, and single embedded video attribute (underline, reverse, or dim) further enhance the DT-100's capabilities. The DT-100 supports 80 or 132 column by 24 row displays which make previewing 132 column reports before they are printed an easy task.

-- 2 --

Power-up parameters for the DT-100 can easily be changed by the terminal operator. At the operator's option these new parameters, including 10 user-defined function key definitions, can be stored in nonvolatile memory so they will be in effect the next time the terminal is turned on. Among the parameters which can be stored are Newline, Wrap-Around, Key Repeat, Video Attribute, Margin Bell, Terminal Mode, Parity, Local Echo, Modem and Auxiliary (printer) Port speeds, Handshaking, Data Word length, Screen background (light or dark), Number of columns, CRT Saver Mode, and Cursor Style. Additional parameters which can be set include Key Click, Video Scroll Rate, and Status Line on or off.

Included with the DT-100 is a TRS-XENIX™ compatible diskette which includes a /etc/termcap entry to allow effective utilization of the DT-100 with Tandy/Radio Shack's Model 16 computer operating with TRS-XENIX. TRS-XENIX is Tandy/Radio Shack's UNIX based multi-user operating system.

The DT-100 (26-6052, expected to be available 7/20/84) retails for \$795.00 and the 9600 baud serial to parallel converter (26-1198, expected to be available 9/15/84) retails for \$99.00 at Radio Shack Computer Centers, Radio Shack Stores and participating Radio Shack Dealers.
