

Introducing the Tandy Workstation

Tandy Corporation announces the Tandy Workstation, an easy to use and simple to learn set of related applications designed for both business and personal use. The Workstation is included with the Tandy 1000 and can be used for a wide variety of tasks.

The Tandy Workstation consists of 6 main applications: TEXT, WORKSHEET, FILER, CALENDAR, TELECOM, and MAIL. In addition, the Workstation contains several functions available for use within any of the applications: HELP, CALCULATOR, ALARM, PHONE, and DATE. Another application, HOST, allows remote-site access to MAIL and Workstation data files.

The Workstation introduces Tandy 1000 owners to the power and versatility of their new computer and applications, giving them the experience and knowledge they need to make confident decisions later about purchasing more extensive features and more sophisticated applications. The Workstation also provides a common set of applications for comparison of features among Tandy's extensive line of personal and business computers.

Workstation Summary

Several functions are available at anytime, anywhere in the Tandy Workstation:

HELP	Information and operating instructions about the application or function
CALC	A simple 4-function calculator
ALARM	Options for examining alarm messages and turning the alarm on and off
PHONE	A list of often-called phone numbers with the ability to automatically dial numbers when used with an auto-dialing modem
PRINTER	For specifying printer margins and pagination
DATE	For setting the system date and time

Other special keys and functions include Quit, Cancel, and Label.

Cursor movement keys move the location marker (cursor) on the screen, with distance moved controlled by using the arrow keys in conjunction with the **SHIFT** and **CTRL** keys.

Main applications include:

MENU	Coordinates all Workstation activities. Used for selecting applications and information used by the applications. Displays a calendar for the current month as well as a list of today's scheduled events. Contains functions for performing routine chores such as deleting and renaming files, changing date and time, and setting the alarm.
HOST	Provides remote-site access to Workstation data files and MAIL messages.
ALARM	Adds and modifies a list of reminders. Events from CALENDAR can also be placed in the list.
TEXT	A simple text entry and editing application used for typing, changing, and printing text information. Contains functions for inserting, copying, and deleting blocks of text, merging documents, setting margins, and finding and substituting phrases.
WORKSHEET	An easy to use yet fully functional spreadsheet. Can be used to solve a variety of problems and create custom applications. Includes functions for inserting, copying, and deleting selected blocks, inserting and deleting columns and rows, defining blocks for use with formulas, text, or constants, and finding and moving quickly to other areas of the sheet.
FILER	A simple filing function used to organize and store a variety of common information. The Form function describes the way information should look on the screen. Information is entered and reviewed using the blank form as a guide. Information can easily be searched, changed, listed on the screen, or printed.
CALENDAR	A handy calendar and scheduling function. Keeps track of scheduled events and helps you plan activities.
TELECOM	A general purpose communication application used for communicating with information services such as Dow Jones or CompuServe. Can be used to transfer files between the other Workstations or similar systems. An auto-log function creates automatic sessions to simplify repetitive procedures.
MAIL	A function for creating and reviewing messages. Messages can be transferred to another Workstation or system using the Mail function in HOST and can also be used locally to organize mailboxes.
