SUBJECT: MultiMate™

FOR IMMEDIATE RELEASE

MultiMate™ Professional Word Processor

Duplicates Features of A Dedicated Word Processor on Tandy 2000®

The popular MultiMate™ professional word processor is a powerful word processing system that duplicates the features of a dedicated word processor. MultiMate is now available for the Tandy TRS-80® Model 2000 Personal Computer. This version of MultiMate, developed specifically for the Tandy 2000, features very fast full-screen response, equal to that of a large system.

This extremely complete program provides more than 100 features and functions in one package, even mail merging. Just one or two keystrokes are required to access most features.

"In the arena of word processing software for the PC almost everything about MultiMate is new and miles ahead of the competition,"* according to PC World Magazine.

MultiMate is easy to learn. Menus are in plain English and on-screen help is always available. Clearly written documentation provides tutorials for the first-time user.

In the words of PC Magazine, "It is very rare in the still-evolving world of computers to find a highly capable program accompanied by a set of instructions mere mortals can understand.

MultiMate is one of those rarities."**

(MORE)

Particularly well suited to business needs, the program speeds preparation of reports, letters and memos. It is ideal for writers, managers, secretaries, or anyone who has been using a typewriter.

A user may create, copy, move, search and replace, or delete text with ease. Text may be inserted or deleted by character, word, line, sentence, paragraph or page. All function keys on the Tandy 2000 are implemented by the MultiMate program.

Page and text features include right justify, center, header, footer, multiline headers, multiline footers, automatic page numbering, margin alteration.

MultiMate supports Radio Shack correspondence quality and dot matrix printers. Printer drivers can also be defined to work with non Radio Shack printers. One document may be printed as another is edited. Underline, boldface, sub/superscript, print multiple copies, delay print and merge print features are included. The special print queue is capable of sequentially printing several documents without additional commands from the operator. Print sequence may be changed at any time.

The program's keystroke macro procedures allow storage and replay of special phrases, functions or whole pages of "boilerplate" text.

A minimum memory of 256K RAM and two disk drives are required. The program also is hard-disk compatible.

Radio Shack's Tandy 2000 version of MultiMate™ (26-5330) is offered for \$249.95 at Radio Shack Computer Centers and participating Radio Shack Dealers nationwide. Radio Shack is a division of Tandy Corporation.

MultiMate is a trademark of MultiMate International Corporation.
