Tandy® 10-Megabyte Disk Cartridge System:

Floppy Disk Flexibility, Hard Disk Drive

The Tandy 10-Megabyte Disk Cartridge System provides a new alternative in hard disk drive back-up systems. This high performance removable cartridge system combines the dependability of a hard disk drive with the convenience of a floppy disk drive.

Many businesses will choose the disk cartridge system as a primary storage device because it is fast and easy to use. Data is transferred as fast as the host allows, up to 1.13 megabytes per second.

With a retail price of \$2,195, the Tandy 10-Megabyte Disk Cartridge System is a low cost-per-byte alternative in removable disk cartridge storage. It works with the Tandy 1000 and 1000 HD, Tandy 1200 HD and other IBM® PC compatible computers, and will soon be offered for the multi-user Tandy 6000 computer with the XENIX™ operating system.

Tandy 10-Megabyte Disk Cartridge System -- Add One

The system's unique design makes it more resistant to shock and vibration than many other fixed or removable disk drives.

The Tandy 10-Megabyte Disk Cartridge System (26-1245), and the 10-Megabyte Cartridge (26-1272), \$89.95 each, will be available in June at the more than 1,200 Radio Shack® Computer Centers and participating dealers nationwide.
