Tandy's Color Computer™ Is A Superb Holiday Gift

The most popular and longest-lived home computer on the market, Tandy's Color Computer™, will be at the top of many family holiday shopping lists this year. It's a low-cost way to start computing that gives the user a computer gourmet's smorgasboard of hardware and software option.

The Color Computer 2 -- now retailing for \$119.95 in a 16K configuration and \$219.95 for a 64K version with Extended Color BASIC -- is a superb value for the price. Customers can determine overall system costs by choosing the computer and peripherals which meet their specific needs.

For Christmas this year, Tandy is introducing more than 25 new programs for the Color Computer, adding even more variety to the more than 150 "CoCo" software packages already available through Radio Shack Stores. A new Color Computer product, Orchestra-90, turns the Color Computer into a music synthesizer.

Color Computer Gift -- ADD ONE

Tandy's long-term commitment to support and service means that all Color Computers, even those introduced in 1980, are compatible with almost all of the newest Color Computer software and hardware.

Computer novices begin computing simply by plugging the computer into a home television set and loading a program. The easy-to-use computer is also an ideal machine for learning BASIC programming.

The Color Computer is a system that can grow as individual understanding and needs grow. The 16K Color Computer 2 with Standard BASIC can be expanded to handle advanced graphics or disk drives by installing an Extended Color BASIC ROM Kit (26-3018, \$39.95). Its memory can be expanded to 64K RAM with the 64K RAM Upgrade Kit (26-3017, \$59.95).

Color Computer systems also may be expanded to include the OS-9 Disk Operating System for program development or use of multi-tasking programs. Disk drives may be added for access to word processing, accounting and advanced graphics programs.

A wide variety of peripherals are available, no matter what Color Computer configuration is in use. The Sound/Speech Cartridge creates three music voices and one-voice speech with certain software packages, and enables the user to write programs for speech and music functions. The Appliance/Light Controller connects lights and appliances to Plug 'n Power™ remote control modules (sold separately at Radio Shack) so times of appliance use can be programmed. All data is transferred to the controller, leaving the computer free for other uses.

-MORE-

Color Computer Gift -- ADD TWO

The Color Computer comes with all the necessary ports for adding peripherals such as joysticks, a Color Mouse the Multi-Pak interface for connecting up to four Program Pak™ cartridges to the Color Computer at once, the Deluxe RS-232 Program Pak and the CCR-82 cassette recorder for storing programs.

The Color Computer 2, Color Computer 2 peripherals and software are available through Radio Shack® Stores and participating dealers nationwide.

Tandy Corporation/Radio Shack is a leading retailer and manufacturer of computers and computer products.
