Dear Editor,

The laptop market, pioneered by Tandy Corporation, is growing as business people accept portable computers such as the Tandy 200 as serious tools for working on the move. Laptop computers - not bulky luggables - have become a familiar sight for working executives in meetings, on airplanes and anywhere work must be done away from the office.

Pontiac's sales communications group is a prime example of a corporation solving today's business problems with a sophisticated, yet easy-to-use Tandy 200 computer. Starting with a pilot program last November, Pontiac gave Model 100 and Tandy 200 portable computers to its district sales managers and district service managers in Denver, Colo., Kansas City, Mo., Jacksonville, Fla. and Newark, N.J. The computers received information from General Motors' mainframe computer in Pontiac, Mich. Daily sales reports and trace reports, locations of specific model cars, news of open owner relations cases, and General Motors' electronic mail all were downloaded to the portables through their built-in modems.

The pilot program so successfully increased the productivity and effectiveness of the managers, that the company is equipping all 350 of its district managers and service managers with Tandy 200 computers. Joe Thompson, Pontiac's manager of sales communications, said his company selected the Tandy 200 computer for its ease of use, built-in spreadsheet and alarm features and the ease with which it kills and copies files. Dependable and convenient service and support provided by the nearly 7,000 Radio Shack outlets nationwide were other reasons the Tandy 200 computers were selected, he said. Thompson can be reached at (313) 857-6522.

This is just one sample of the way Tandy computers are meeting business needs for information and communications. I do hope you'll call me at (817) 390-2129 anytime you need the latest information on technology or computers. I'll be glad to provide you with accurate information in time to meet your deadlines.

Peterborough, NH 03458

Dear Ryan:

Thanks for the opportunity to review your review on the Tandy 200, and the one on the PFS series. We have made some notes to the copy, and I'm returning it to you here.

You might want to pass on to Terry (and he might want to verify and include it, since to my knowledge, it hasn't been published anywhere yet... Bill Walters tells me that the linefeed after carriage return can be enabled with POKE 61243,1, and disabled with POKE 61243,0.

I know you're probably on short time, and I don't have a 200 in the department (would you believe)! So, Terry might want to verify it for himself. This *is not* official Tandy information!

Sincerely,

Ed Juge
