Leadership, Value, Keys to Tandy's Future

Pledging to continue an aggressive leadership position by offering the best personal computer values in the industry, Tandy CEO John V. Roach said that his company's success in the computer marketplace hinges on the ability to offer purchasers the best possible value.

"We expect the 'shake-out' in the computer industry to continue for the next 12 to 15 months, but I think it's already clear that the survivors will be those companies which offer buyers the best values," said Roach, who went on to note that Tandy, the third largest hardware manufacturer, is positioned to thrive, not just survive, in a continuing shake-out.

Innovation, rather than a reliance on "cloning" popular products, is essential in order to succeed, he added. "Even with a well-established standard like the MS-DOS® operating system which provides a broad applications software base, you have to offer more than 'just another computer' in order to compete. It all goes back to value," he explained.

Leadership, Value, Keys to Tandy's Future -- Add One

"Value is more than price," Roach said. "We believe our product line, with specific offerings designed for different user needs, and our aggressive pricing combine with unexcelled after-the-sale support to give Tandy users an excellent reason to choose and stay with Tandy products."

Tandy has demonstrated its leadership several times recently, Roach added. He cited new products like the Tandy® 1000 HD personal computer (on display for the first time at PC Expo and NCC), and the Tandy Disk Cartridge System, as well as aggressive pricing on Tandy's popular Tandy 1000 Personal Computer (currently priced at \$999). Leading the way in customer service as well as products and pricing, Tandy recently expanded its nationwide customer support and repair operations with 56 regional Area Training and Support Organizations (ATSOs) which provide on-site set-up and orientation, and local software consultation and training, plus 60 Business Product Service Centers offering unexcelled repair availability. Customers can choose walk-in or on-site repair, and in many cases, repairs can be done "while you wait."

"We're excited about the next year, because we feel we're positioned correctly to take advantage of the market's changes. One area that we feel will continue to grow is peripherals and add-ons. The Express Order Hardware Program we have just announced is indicative of the confidence we are placing in this segment of our business," Roach continued.

Leadership, Value, Keys to Tandy's Future -- Add Two

"We're very proud of our products, proud of our customer service, and committed to maintaining the long-standing relationships we've built with business and individual customers. When you look at the market, I think you'll agree with me that those are the three essential ingredients to success and growth in the personal computer industry."
