

October 4, 1985

Dear Editor,

The home computer market is changing this season. Contrary to media predictions, customer demand appears to be high. Another change is a split in the market, with two distinct types of customers buying computers. At the upper end, customers demand a system with full business functions such as the Tandy 1000 computer, the best-selling computer in Tandy's history. For traditional home computer buyers - families and hobbyists - the Tandy Color Computer remains the system of choice. Sales of the Color Computer have been high since its introduction. It continues to be particularly popular among families new to computing.

Customers say they like the Color Computer because it's inexpensive, and comes with a computer gourmet's smorgasboard of hardware and software options. The customer can determine the cost of his overall system by choosing the computer and peripherals that meet his specific needs.

For Christmas this year, Tandy is introducing more than 25 new programs for the Color Computer, adding even more variety to the more than 150 CoCo software packages already available through Radio Shack Stores. A new Color Computer product, Orchestra-90 CC, turns the Color Computer into a music synthesizer, adding three orchestra voices and one speech voice.

Please take a look at this press kit for a better idea of why the Color Computer remains the top-selling home computer. If you have questions on the Color Computer or any other Tandy products, please feel free to call me at (817) 390-2728. We're always glad to give you the information you need on time to meet your deadlines.

If you'd be interested in trying the Color Computer, please let us know. We have an extensive editorial loan program designed to give you the opportunity to "test drive" our products yourself.

Yours truly,

Deborah McAlister
Public Relations Manager
