

TANDY... Clearly Superior™

TCS-100 Tape Cartridge System

Now you can get reliable hard-disk backup on tape. With the TCS-100 system, you can back up 10 megabytes in as little as 6 minutes. Each cartridge can store up to 48 megabytes of programs and data.

TCS-100 Tape Cartridge System

Get Reliable Hard-Disk Backup on Tape

Get maximum and efficient backup protection for your Tandy 1000, Tandy 1200, IBM PC or PC compatible. The TCS-100 Tape Cartridge System (25-3020) is the fastest and most flexible way to protect your hard disk data.

No more worries about your computer crashing, being stolen or burning with all your valuable records locked into a hard disk. Now you can carry over 48 megabytes of program and data on a portable cartridge.

Rapid Backup

The TCS-100 Tape Cartridge System backs up 10 megabytes of data in as little as six minutes. Now you can back up during a coffee break or after massive data entry without tying up your computer for hours.

File-by-File Storage

The TCS-100's file-by-file backup/restore function is pure power. Select single files, groups of files or all files. Select files based on globals, wild cards, files modified since last backup, file creation data, directory structure and more. During file-by-file restore, you have the power to selectively recover any file you may have accidentally

erased—without affecting any of your good data.

File-by-File Bonus

When disk files are created, they're recorded sequentially. But as they enlarge, they become fragmented. The disk head must then reposition several times to read a file. The result? A slow disk. The TCS-100 is different. Just make a total file-by-file backup, reformat your disk, and restore. Your disk files are automatically defragmented. The result? Your overall system speed is maximized.

Read After Write

The TCS-100 Tape Cartridge System has three heads: Read, Write and Erase. The advantage? One pass with immediate read-after-write verification. Systems with one head require up to three passes. Plus, with the TCS-100, if data needs to be re-recorded, it's immediate—without slowing the backup. Some systems need to re-record the entire backup after an error. The TCS-100 does it right the first time.

Multi-Volume Storage

The TCS-100 can store up to 256 backups on each 48MB

tape. Each is labeled by you (up to 42 characters) and recorded at the beginning of tape for quick reference. When you later insert the tape into the drive and request TAPE DIRECTORY, the backup labels are shown on the screen. The TCS-100 then lets you scroll through the volume labels and select the one needed. A single keystroke moves the tape to the selected volume and displays the backup's directory. Select. Scroll. Select. You choose the file or file group you need to copy to hard disk or floppy. Multi-volume recordings with tape directories are simple and powerful with the TCS-100.

Zero Footprint

The TCS-100 takes up no desk space. Put it next to your CRT and your desk is free for work.

The Best Storage Backup You Can Get

The TCS-100 is the highest performing tape backup system available for your computer. Use the TCS-100 Interface Kit (25-3021, not included) for Tandy 1000, 1000 HD, 1200 HD and PC compatibles. Then buy as many 1/4" data tape cartridges (26-1391) as you need.
