

TESTED

Manufacturer: Tandy Corporation

Systems: Tandy 1000 SX with MS-DOS version 3.20 and GW-BASIC version 3.20 Tandy 1000 EX with MS-DOS version 2.11 and GW-BASIC version 2.02

Test date: July, 1986

Future Computing's testing of personal computers includes a determination of whether or not a given computer will run selected top-selling software packages intended for PC-Compatible machines. One of the criteria for a computer to be rated operationally compatible is that it runs such software.

Future Computing has rated the combinations of computer, operating system, and BASIC interpreter listed above as operationally compatible with software intended for PC-compatibles.

Programs that run include:

- | | | | |
|------------------------------|---------------------------|----------------------------------|------------------------------|
| • 1-2-3 release 1A | • Frogger | • PFS:PLAN version A:00 | • SideKick version 1.56A |
| • 1-2-3 release 2.0 | • MSKERMIT version 2.27 | • PFS:REPORT version B:01 | • Symphony version 2.0 |
| • Adventure version 1.0 | • MultiMate version 3.30 | • PFS:WRITE version B:00 | • Symphony version 1.1 |
| • dBASE II version 2.43 | • Multiplan version 2.0 | • Pocket APL version 1.0 | • Think Tank version 2.1 |
| • dBASE III version 1.1 | • PC-TALK III | • R:base 4000 version 1.1 | • TK!Solver version TK-1(2J) |
| • dBASE III PLUS version 1.0 | • PFS:ACCESS version C:00 | • RBBS CPC12.5B (compiled BASIC) | • Turbo Pascal version 3.01A |
| • Decathlon version 1.00 | • PFS:FILE version B:01 | • Reflex release 1.1 | • VisiCalc version 2.04 |
| | • PFS:GRAPH version B:01 | | • WordStar release 3.30 |

Tandy supplies a program with each computer to accommodate differences between the Tandy 1000 and IBM PC keyboards. Features of some programs may not run as documented because of keyboard differences. Examples of such programs include:

- | | | |
|---------------------------------|--------------------|---------------------------|
| • Flight Simulator version 2.00 | • WORD version 2.0 | • Smartcom II version 2.1 |
| • Framework II version 1.0 | • WORD version 3.0 | • SuperKey version 1.11A |

Although the Tandy 1000 EX does not include slots for IBM-compatible add-on cards, the Tandy 1000 SX accommodates cards that are 10-1/2" or shorter in length. Examples of add-in cards that run with the Tandy 1000 SX include:

- | | | |
|--------------------------|-----------------------|-------------------|
| • Hayes Smartmodem 1200B | • Hercules Color Card | • Microsoft Mouse |
|--------------------------|-----------------------|-------------------|

Future Computing makes no representation that it tested every possible factor relating to the computer's ability to operate with the named software or add-in cards. The software itself was not tested for bugs, errors in operation, or results of operation. Future Computing has performed the above tests at the request of and for the sole benefit of Tandy Corporation.
