

TANDY CORPORATION AND THE EDUCATION MARKET

Much of Tandy Corporation's success in the education market is due to its strong commitment to product development, marketing and support.

- o In 1979, Tandy introduced the first low-cost classroom network system, the Network 1. Networks 2, 3 and 4 have followed to form a series of increasingly sophisticated classroom network systems.
- o In 1980, Tandy formed the Radio Shack Education Division and began to develop educational software. By January 1985, more than 125 titles were completed and another 100 were in development. This is by far the largest courseware development commitment of any microcomputer manufacturer.
- o In 1981, Tandy began to offer free computer literacy training to teachers at all levels. By Fall 1983, more than 400,000 teachers had completed this training at Radio Shack Computer Centers.
- o In 1982, Tandy began providing formal support for educational publishers, including equipment loans and an annual Publishers' Workshop. Today, Tandy has more than 100 cooperative marketing agreements with various publishers for the development of educational software.
- o In 1982, the company began the Tandy Educational Grants Program to support research and development activities in educational technology. Since that time, more than \$1 million in educational hardware and software products has been donated by Tandy Corporation.
- o In 1983, Tandy Corporation and the University of Texas at Austin co-sponsored the first National Conference on Technology and Education. The conference has become an annual event, attracting a remarkable list of educators and computer specialists from around the world.
- o In 1984, Tandy announced its sponsorship of the Council on Microelectronics Technology, an association of universities and researchers who exchange information on educational uses of technology.

Today, Tandy Corporation continues to introduce innovative computer products and add to its line of educational software. Projects include cataloging public domain software, supporting Tandy Educational User Groups and providing software information through a national database.

Sales of Tandy computers to school districts, colleges and universities worldwide have increased rapidly and today represent a substantial part of the company's computer business. Because of Tandy's commitment to quality computer products and its extensive technical support, Tandy is "Clearly Superior™" and "The Name in Classroom Computing™."
