RADIO SHACK EXPANDS CELLULAR TELEPHONE LINE

NEW YORK, NY -- Radio Shack today unveiled its latest offerings in cellular telephone technology, the portable CT-300 and the mobile-only CT-100, increasing its product line to three versatile models.

"Radio Shack was a major player in the cellular phone industry with just one product, our fast-selling transportable unit," explains Bob Miller, Radio Shack vice president of merchandising. "Now we offer a full line that is affordable, portable and capable of meeting every cellular need."

The Radio Shack CT-300 Portable Cellular Telephone combines advanced technology and design simplicity in a light-weight, hand-held cellular phone. This feature-packed phone is about the size of a cordless telephone and weighs only 28 ounces including the antenna and battery.

The CT-300 includes a multi-function LCD display which shows the number being dialed, cumulative call length and even your own telephone number. Also featured are memory dialing which stores and dials up to 40 phone numbers with a two-digit code and one-button redial of the last number dialed.

add one

An electronic lock prevents unauthorized outgoing calls but permits "911" emergency calls. A No Service/Roam indicator tells you when you are out of your service area or in a service area other than your own. The phone has backlighted controls for easy operation at night, tone service compatibility which permits use of touch-tone service, and a scratch pad memory to temporarily store a number during a call.

The CT-300 (Cat. No. 17-2001) retails for \$1,499 including the transceiver, built-in rechargeable battery pack, portable antenna, and carrying case with strap. Separate accessories include charging stand, AC adapter, mobile mounting kit, hands-free/data interface, and extra rechargeable battery packs.

The CT-100 is Radio Shack's lowest priced, full-featured cellular phone. This mobile-only unit delivers full 3-watt performance and includes the handset, transceiver, monitor speaker, a microphone that attaches to the sun visor (for hands-free operation), and all the hardware needed for installation under the dash or seat.

The CT-100 has all the features of the CT-300 as well as a speaker monitor that lets you dial and listen without lifting the handset, a speaker jack for an optional external speaker and 98-number memory. The CT-100 (Cat. No. 17-3001) retails for \$799.

An improved version of Radio Shack's popular 3-watt Transportable Cellular Telephone (Cat. No. 17-1003, mobile mount or battery-operated portable) continues at \$1,199. (Portable adapter and batteries optional.)

Radio Shack, at time of purchase, will assign the cellular telephone number, program it into the telephone, and handle all the paperwork so the phone may be used immediately. The equipment is backed by a one-year warranty honored nationwide and an optional three-year Extended Service Plan. To make the cellular telephones easily affordable, Radio Shack offers financing and a commercial lease plan.

Prices apply at over 7,000 Radio Shack stores and participating dealers, wherever cellular service is available.
