NEW RADIO SHACK INTEGRATED RECEIVER MARRIES THE LATEST IN AUDIO AND VIDEO TECHNOLOGY

This Christmas thrill the electronics buff in your life with the new Realistic® AV-900 integrated FM/AM/TV audio/video receiver from Radio Shack®. This state-of-the-art receiver is the ultimate marriage of audio and video because it combines the functions of a multitude of components into one control center to make even the most complex functions simple, many at the touch of a single button.

"People were telling us they wanted the latest and best in audio and video," said Bob Miller, consumer merchandising vice president for Radio Shack. "Our product managers worked with our audio and video engineers to come up with the ultimate home entertainment package."

At 35 watts per channel, the AV-900 is a full-featured, 140-channel, cable-compatible TV-receiver with MTS stereo, SAP and UHF/VHF broadcasts. It is also a high-fidelity digitally synthesized AM/FM stereo receiver as well as an audio/video control center. Its simulcast function not only delivers TV/FM simulcast programs but also stores four cable channel/FM stereo frequency "pairs" in memory, eliminating the need to separately tune the TV and FM frequencies.

The TV portion of the receiver is compatible with all television sets and baseband video monitors to deliver the finest audio/video reception.

-more-

The AV-900's infrared remote control lets you select a myriad of equipment: turntable, tape deck, CD player, two VCRs, or one VCR and one video disc player, plus a Dolby[®] surround decoder (also available at Radio Shack). Dub from VCR TO VCR, from CD to VCR, from turntable to cassette--all without ever switching a patchcord. You can also watch a movie while dubbing a personal video, or put your favorite music onto the soundtrack of any videotape, even from a CD.

Not sure how to put an audio/video system together? Radio Shack can help you choose affordable components that meet your every technology need. The new 1988 Radio Shack catalog even features special prices on complete systems that include the AV-900 receiver.

The AV-900 retails for \$599.95 and is available nationally at over 7,000 Radio Shacks and participating dealers.

For Christmas giving, personal electronics offers an extraordinary value. Almost every year brings more technologically advanced products, at even lower prices and there is no better selection or more convenient location to complete Santa's wish list than your neighborhood Radio Shack[®].
