TANDY ANSWERS AMERICA'S CHALLENGE

**TANDY AMERICA'S TECHNOLOGY
CORPORATION ANSWER™** ☒ ☒ ☒ ☒

World-Class Product Development & Manufacturing

Every Tandy product must survive exhaustive quality control testing.

Vertical integration lets us compete against the world's most formidable low-cost manufacturers.

Competitiveness . . .

. . . inspires the tradition, a *winning* tradition . . . achieved by Tandy's product development and engineering teams. The result: technological breakthroughs for broad-based markets.

Tandy's diverse technology base has brought many "firsts" to market . . . impacting audio, video, telephony, microcomputing, magnetic media and others.

Tandy's ability—possibly more than any other American company—to "breakthrough" products to the marketplace has built Tandy into a multinational firm with revenues currently exceeding \$3.5 billion annually . . . in an environment that has seen a decline by some other electronics manufacturers.

As a result of this growth, one or more new manufacturing facilities has opened every year for the past 15 years.

Quality . . .

. . . drives the tradition at 24 of Tandy's USA plants in Texas, California, Illinois, New Jersey, Iowa, Missouri, North Carolina, and spreads worldwide to our five plants in Korea, Taiwan and mainland China . . . new USA plants are planned for 1988 in Texas, Virginia and Utah.

Tandy's vertically-integrated manufacturing produces high-quality, low-cost products and subassemblies for itself and others as well. As a result, we produce exceptional values in both consumer electronics and business products.

Our MS-DOS based personal computers are an excellent example. With mean times between failure of up to 58,000 hours, they set the standard in quality . . . as well as value.

Price/Performance Breakthroughs

Innovation . . .

. . . fuels Tandy's tradition of price/performance breakthroughs . . . created by our own research and design . . . and through strategic joint development efforts.

Tandy breakthroughs span the spectrum of technology. But Tandy Corporation isn't content with being just first . . . Tandy is in business to build a lasting impression of quality and value.

It was Tandy that produced the first personal computer available nationwide. Many of the satisfied owners of these TRS-80® Model I's are still using their systems today.

We also introduced the Model 100, the first laptop computer with five ready-to-run programs built in.

Today, Tandy offers a complete line of MS-DOS® computers. The line includes our technologically-advanced Tandy 1000 family, as well as our top-of-the-line Tandy 4000 that combines exceptional reliability with a market-leading low price for a 386-based PC.

In telephones, Tandy pioneered low-cost cordless telephones and telephone answering devices. Tandy also introduced the first

affordable transportable cellular phone. This achievement was followed by one of the most technologically advanced products ever made by Tandy: the CT-300. A 28-ounce *hand-held* cellular phone.

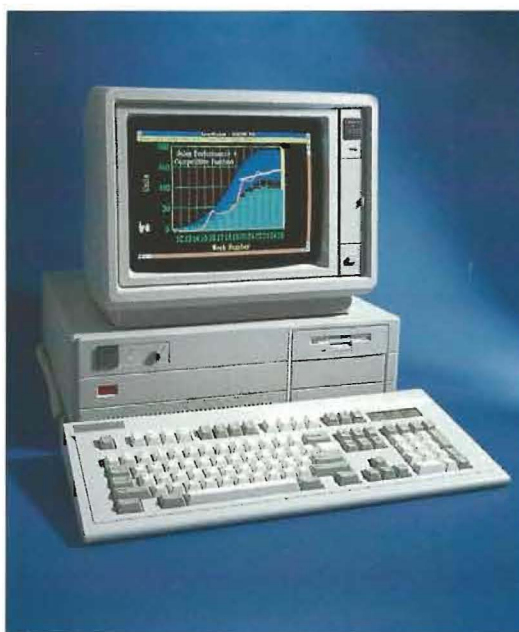

Consumers looked to Tandy for America's first radio designed specifically to receive broadcasts from the National Weather Service: our famous Weatheradio®. We were the first to market hand-held VHF radios covering aircraft and police bands as well.

Tandy also brought digital stereo receivers into the home by making them affordable. Our latest development is a unique integrated audio/video receiver that provides full and simplified control of a sophisticated home entertainment system.

Over the years, remote-controlled TVs, VCRs, compact disc players and stereo receivers have all been built to Tandy's exacting standards. Now, we've built a universal infrared remote control that eliminates all other infrared controllers in a home. And our remote is designed with a typical Tandy feature millions of Americans have come to expect . . . affordability.

Our portable hand-held cellular phone puts the whole world in your hand.

Our Tandy 4000 brings minicomputer performance to desktop PCs.

Tandy engineered and built . . . the first true marriage of affordable, high-performance audio and video in a complete control center.

Unparalleled Distribution & Marketing

Radio Shack, The Technology Store, is America's largest chain of electronics retail stores, dealers and computer centers. Eight distribution centers ship over 775,000 cartons of merchandise each month to over 7,000 locations. Tandy's own trucking firm helps expedite this phenomenal volume.

After-sale support and service is unequalled in the industry. In fact it's cited by our customers as a major advantage of buying Tandy quality-made products.

More than 36,800 cartons are shipped every day—over half via our own trucks.

Tandy is truly the distribution system for the products of technology. Other major distribution channels include leading retailers, manufacturers and businesses.

Over 35,000 retail outlets nationwide sell Memorex® brand audio and video cassettes, batteries and accessories. Our O'Sullivan brands lead the electronics rack, desk and cabinet field.

The Name Brand Retail Group is the largest chain of audio, video and appliance stores in the USA.

Our franchised dealer organizations encompass consumer electronics, cellular telephones and value added resellers . . . further broadening our market penetration.

Tandy provides products and subassemblies to other high-tech manufacturers. Lika has become one of the largest high-quality multilayered printed circuit board manufacturers in America.

The Tradition Continues . . .

Whether Tandy is supplying the automotive industry . . . the telecommunications industry . . . or the home consumer . . . America can depend on . . .

***Quality . . . Innovation . . .
Competitiveness . . .***

***it's America's Challenge
. . . it's Tandy's Tradition!***

***We are America's distribution system
for the products of technology.***
