RADIO SHACK INTRODUCES THE TANDY 4000 PERSONAL COMPUTER WITH HIGH-PERFORMANCE 80386 TECHNOLOGY

NEW YORK CITY--"The 80386 is now an affordable option for all users," said John V. Roach, president, chairman of the board and chief executive officer of Tandy Corporation during the introduction of the \$2,599 Tandy® 4000 personal computer.

This technologically-advanced system is designed for the future as both a stand-alone system and the heart of a connectivity environment. It is designed to run MS-DOS® 3.3, OS/2™ and Unix® 5.3 operating systems and the Microsoft® Windows operating environment, and it will support a wide range of powerful graphics capabilities including VGA, CGA and EGA.

Backed by Radio Shack's 10 years experience as a leading manufacturer and retailer of personal computers, the Tandy 4000 computer features the Intel® 80386 microprocessor operating at 16Mhz, a 3.5-inch, 1.44 megabyte (Mb) floppy disk drive and four state-of-the-art, single-in-line memory modules (SIMM) in the base configuration of 1Mb.

Each module contains nine 256 kilobyte (Kb) chips thus requiring less physical space in the computer for memory expansion. Additionally, SIMM technology features improved reliability and consumes less power.

Tandy 4000 Personal Computer--ADD ONE

The new Tandy 4000 computer features eight application specific integrated circuits (ASIC) for added reliability.

Designed and manufactured by Tandy in the U.S.A., the 4000 follows the company's tradition of innovative pricing with its low suggested retail price.

Its speed, capabilities and price make it especially attractive for use in multiuser systems as a network file server, engineering workstation and desktop publishing system with a laser printer.

Standard configuration of the Tandy 4000 includes 1Mb RAM, expandable to 2Mb on the main logic board using 256Kb RAM modules or 8Mb using 1Mb RAM modules. One dedicated 32-bit slot for memory expansion is also included. The optional 2Mb Memory Expansion Board brings maximum memory configuration up to 4Mb using 256Kb RAM modules or 16Mb using 1Mb RAM modules.

The bus structure of this machine is compatible with industry-standard AT™ and XT® boards, making literally hundreds of options available off the shelf.

Additionally, two open half-height front drive slots allow customers to select the storage options they prefer. These include a 3.5-inch, 720Kb or 1.44Mb floppy disk drive; 5.25-inch, 360Kb or 1.2Mb floppy disk drive; 40Mb, 28 millisecond (ms) hard drive; 20Mb, 65ms hard drive; 20Mb internal disk cartridge system and 40Mb tape backup system.

Tandy 4000 Personal Computer--ADD TWO

An enhanced keyboard, serial and parallel ports and keylock/chassis locking mechanism give added value to the Tandy 4000 system.

"The Tandy 4000 personal computer represents Radio Shack's commitment to continued value leadership in high technology," Roach added. "We will continue to provide our customers the flexibility they need to build a customized system rather than force them into a configuration which may not suit their needs."

The Tandy 4000 personal computer (Cat. No. 25-5000) is available through Radio Shack® stores, Radio Shack Computer Centers®, Radio Shack Plus Computer Centers™ and participating dealers nationwide.
