Tandy's Strategic Objectives...

Meeting the challenge of the '90s

Tandy Corporation is emerging from the '80s as the pre-eminent electronics company in America. We are poised to meet the challenge of the '90s by bringing affordable, high quality, innovative electronic products to a broad base of consumers.

Our vision of continued growth and expansion is predicated on a technology base in audio, video, telephony, personal computers and magnetic media, which is supported by world-class manufacturing and sourcing and driven by a multifaceted distribution system.

This unique platform has provided us with the strength and knowledge to consistently bring breakthrough products to market at breakthrough prices that will move them into homes, offices and classrooms across the nation.

In the next decade and beyond, companies must have the vision to perceive the needs and desires of the American consumer. To remain competitive, companies must have the capabilities to make that vision a reality . . .

. . . in the highly competitive electronics industry, Tandy Corporation, without equal, has the vision and the capability to meet the challenge of the future. Our vision is reflected in four strategic objectives which maximize our vast capabilities:

✓ **Continuing growth in sales volume per location...**

is the basis for a multiyear plan of store renovation, expansion of merchandise offerings, aggressive promotional techniques, in-depth sales personnel training, and enhancements in productivity and distribution. Consistent double-digit sales increases over the past three years indicate achievement in these important areas. These strategies will enable us to better meet and serve customer needs and demands in sophisticated technology products.

✓ **Leveraging our computer technology base...**

through the development of meaningful alternative channels of distribution and through opportune acquisitions. Outstanding design and manufacturing capabilities enable us to offer state-of-the-art computer products for home, education and business use. Products like DeskMate, our user-friendly software interface, continue to impact the computer industry and offer market-broadening potential. Additional growth is targeted through direct sales agreements with specialized resellers and through acquisitions like GRiD which opens significant government and Fortune 1000 marketing opportunities.

✓ **Accelerating the growth in cellular telephones...**

by increasing awareness in the marketplace and by developing alternative channels of distribution. While cellular telephones have primarily been targeted to the business environment, we perceive a growth in their augmentation as personal security and emergency devices. In addition to our traditional retail channels, this significant market potential is addressed by strategic alliances in technology, manufacturing and service.

✓ **Capitalizing on world-class manufacturing...**

that produces innovative, quality products to be sold through an ever increasing number of retailers, dealers, resellers and manufacturers. Supported by research and product development at seven locations in four countries, manufacturing plays a major role in stimulating market expansion. For example, the enormous potential of TANDY THOR-CD as the first CD-compatible record and erase optical disc technology could spawn a whole new segment of the electronics industry.

With these objectives, Tandy Corporation is sharply focused on transforming its vision into reality. With constant attention to innovation and quality in both products and earnings, Tandy is a dynamic force in the development and marketing of an ever increasing spectrum of electronic products. These assets coupled with a highly competitive spirit in all facets of its operations make Tandy Corporation America's Technology Answer to the challenge of the '90s . . . and beyond.

Agenda for Wednesday, July 27

12:00 noon	Buffet luncheon	
1:00 p.m.	Introduction and Welcome	John V. Roach Chairman of the Board, CEO and President Tandy Corporation
