RADIO SHACK PRESIDENT BRIEFS ANALYSTS ON COMPANY DEVELOPMENTS

Fort Worth, TX. September 28, 1989 -- Bernard S. Appel, president of Radio Shack®, briefed industry analysts meeting in Fort Worth on recent developments within the company.

Radio Shack's 2,956 consumer and computer products for 1990 include 434 new items. Appel detailed several interesting and innovative products. This year, the company introduced new top-of-the-line Optimus® brand audio components which it hopes will create a new standard in affordable home entertainment systems.

The company is capitalizing on customer recognition of Radio Shack's quality, service and brand integrity, through extensive newspaper, magazine, television and flyer advertising.

Appel said The Technology Store® remodeling plan is on schedule, with more than 2,100 stores already completed and approximately 600 stores being completed each year. "Sales in our Technology stores still continue to outpace the non-technology stores."

Appel discussed the importance of Radio Shack's new Point of Sale system. Each store has a Tandy® 4000 host computer, operating under UNIX®, with Tandy® 1000's as terminals. Valuable sales information is reported daily to Fort Worth. "The P.O.S. system is the productivity tool that we need to increase sales volume per location and bring us closer to our long term goal of \$1,000,000 per average store."
