TANDY DISCUSSES MARKET OPPORTUNITIES FOR OPEN DESKTOP PRODUCT

Exhibit Demonstrates Workstation Power of '386-based PCs

FORT WORTH, Texas -- During an analyst briefing, Tandy Corporation officials today discussed its market direction for the soon-to-be-released Open Desktop™ operating environment for UNIX® from The Santa Cruz Operation, Inc. (SCO™).

A demonstration of this highly-integrated UNIX® System-based operating environment illustrates the market potential for a full 32-bit, multiuser, multitasking operating system utilizing a standard graphical user interface and providing all the features and benefits of high-end graphical workstations at PC prices.

Open Desktop provides customers of both Tandy and GRiD Systems products a low-cost, high-performance solution that takes full advantage of the power of the '386™ microprocessor.

Tandy Corporation worked with SCO, Locus Computing Corporation, Digital Equipment Corporation, and Relational Technology, Inc. to define the scope and implementation of the product.

Open Desktop incorporates SCO UNIX System V/386 Release 3.2 for binary compatibility with both UNIX System V and SCO XENIX® System V applications; OSF/Motif™ graphical user interface that provides an appearance and behavior similar to Microsoft Corporation's Presentation Manager; SCO Xsight®, the (X11) X Window System™ from MIT that lets users run multiple programs simultaneously on a standard CGA, EGA or VGA display; INGRES/386™ relational data base management system based on Structured Query Language (SQL) for advanced information management; connectivity to dissimilar systems through Ethernet®

--more--

support of SCO TCP/IP and remote file sharing functionality of SCO NFS™ protocol; and DOS-UNIX System integration provided by Merge 386™ software thus protecting current investments in MS-DOS®-based software and eliminating the need to retrain personnel or undergo program/data conversions.

More than 500 developers have joined the SCO Open Desktop Developers Program and received early releases of product since May, representing a wide range of workstation, business and personal productivity applications due to ship when Open Desktop is released to the public next spring.

Open Desktop is now shipping to software developers and corporate customers doing in-house software development. Tandy will be the first to market Open Desktop to end users. It will be available during the second quarter of 1990 in single-user, multiuser and developer configurations with suggested retail prices starting at \$995.

Suggested retail prices are good at Radio Shack Computer Centers®, and participating stores and dealers nationwide.
