TANDY UNVEILS NEW WINDOWS ORGANIZER Combines New Software and Hardware to Create Unique Multimedia Personal Computer

FORT WORTH, Texas -- Tandy Corporation unveiled today the new Tandy® WinMate™, a software organizer for Microsoft® Windows™. WinMate software, designed specifically for the new Tandy® *Sensation!*™ Multimedia Personal Computer, makes the power of Windows easier to use.

"Windows software is a powerful application management tool, but we believe something more is needed to make it even more accessible and easier for the entire family to use," said John V. Roach, chairman and chief executive officer of Tandy Corporation.

"Tandy's WinMate organizer software was designed to meet that need."

The "WinMate Difference" helps give *Sensation!* a decisive edge over the competition. When *Sensation!* powers up, WinMate's inviting category menu appears on the screen, ready to use. WinMate is organized into eight function categories with dozens of exciting, interactive multimedia applications. Users may select directly from the screen or choose a digitized voice description of the category. WinMate's categories are: In the Know, In Touch, In the Bank, In Control, In Charge, In Play, In Print, and Inside. Even though WinMate provides many exclusive advantages, the system still functions as a high performance, fully compatible PC.

In the Know: This complete reference library accesses Microsoft® Bookshelf® for Windows™. Featured are The Concise Columbia Encyclopedia, The American Heritage Dictionary, Roget's II Electronic Thesaurus, The World Almanac and Book of Facts 1992,

--more--

Bartlett's Familiar Quotations, The Concise Columbia Dictionary of Quotations, and Hammond Atlas. The Library also lets users take an electronic stroll through the Multimedia Museum.

In Touch: This unique communications application includes Teleminder, an advanced telephone answering system with state-of-the-art voice mail capabilities that may be accessed from a remote location; and Message Center, featuring text to speech technology. Message Center accepts verbal or typed messages for individual household members and replays them in a text or speech format. Through Teleminder, users may call Message Center and have their messages "read" to them.

In Touch provides the link to a wealth of information via America Online, PRODIGY, and The Sierra Network communications software. These online services permit users to communicate with other subscribers through electronic mail; access a variety of educational or entertainment services and information; or plug-in to up-to-the-minute news, weather, and sports headlines. Valuable business or financial information is always available in a timely, easy-to-use format and users can even indulge in a little electronic shopping

Another In Touch feature is Profiler which lets users choose the applications they want, custom design the screen (using a wide array of available clipart), and insert a password to deny unauthorized access.

In the Bank: An efficient financial planner that incorporates many of the powerful productivity tools in Microsoft® Works for Windows™. In the Bank applications let users register and balance checkbooks, create charts and graphs illustrating expense categories and trends to aid in budget decisions, establish investment portfolios to track stocks and bonds, calculate present and future investment values, and perform standard or scientific calculations.

In Control: A great home management helper that features Home Inventory, to track personal property for insurance and estate purposes; Unit Conversion, to convert weights and measures; and Collections, to launch pre-set databases for personal collections. Collection databases include antiques, baseball or football cards, books, coins, stamps, jewelry, plants, CDs, records, tapes, videos, software, and wine.

In Charge: A set of personal management programs including Calendar – which combines a calendar, to do list, and appointments scheduler. Teleminder, utilizing text to speech technology, may be used for remote access to the appointments scheduler. In Charge also permits users to keep track of the time with a digital or analog clock display; maintain a personal journal with built-in security features; establish a personal phone book – which may interface with Microsoft's word processor to mail merge form letters or customize holiday greetings; and access a complete listing of all AT&T 800 numbers

In Play: Offers Math Fun, featuring mathematics applications which may be tailored to a child's age and/or abilities; Type Defense, a typing education program; ABC Primer, utilizing multimedia techniques to help pre-readers recognize letters and their sounds; Puzzler, an electronic jigsaw puzzle; Windows Solitaire and Minesweeper games; and Hangman, an old classic with new graphics, sound effects, and speech.

In Print: Provides a variety of printing formats to create banners, cards, signs, notices, and name tags. These formats may be decorated by choosing from hundreds of pieces of clipart available through Graphics Manager.

Inside: Accesses all standard Windows tools and accessories including Paintbrush, Write, Notepad, Calendar, Cardfile, Control Panel, Set Up, File manager, Media Player, Sound Recorder, Clipboard Viewer, and Program Manager.

WinMate software and Tandy's new *Sensation!* MPC, a combination so easy to use that *success is guaranteed*, will be available in October at nearly 7,000 participating Radio Shack® stores and dealers nationwide.

Tandy and Radio Shack are now celebrating 15 years of leadership in the digital electronics industry.
